

Appendix B: Summary of scope fulfilment

2023 ACE deliverable	Work completed
Identify key partners	Engagement with members including Primary Care Action Group, SGFP, member focus groups, two member webinars; Ministry of Health, Ontario Health, PCAT; primary care organizations including OCFP, AFHTO, Alliance, and health system partners
Clarify physician leadership roles	Patient Core Team model positions physicians as responsible for attachment and the need to build and fund teams that support their capacity to attach patients
Assess workforce and team composition needs	Development of recommendations related to team composition, workforce planning, and interdisciplinary practice
Identify system enablers	Identification of funding requirements, administrative supports, change management needs, and implementation considerations
Analyze impact on access, quality and system costs	Policy analysis focused on patient attachment, access, continuity, quality of care, physician capacity, and system sustainability
Identify equity barriers and propose solutions	Flexible team composition that may include physicians, nurses, physician assistants, administrative staff, patient navigators, and other healthcare professionals, depending on community needs and local practice models.
Define advocacy strategies	Ongoing advocacy through PCAT engagement, primary care policy development, and team-based care recommendations
